SUMMARY

Software engineer focused on building scalable distributed systems and high-availability cloud platforms. Experienced in backend architecture, performance optimization, and system reliability in production environments. Proven ownership of end-to-end systems from design through deployment, delivering measurable improvements in security, latency, and operational stability.

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, SQL
Backend: Node.js, Flask, Django, REST APIs, Microservices
Cloud: AWS EC2 S3 RDS Lambda, Distributed Systems
Databases: MongoDB, MySQL, Redis
DevOps: Docker, CI/CD, GitHub Actions, OpenTelemetry
AI/ML: LLMs, Transformers, NLP, Embeddings, Prompt Engineering
Core: Data Structures, Algorithms, OOP, System Design

WORK EXPERIENCE

Software Engineer, NOMS Consulting Pvt Ltd Mar 2025 Present
Adore CRM Enterprise Sales Pipeline Platform

- Architected an enterprise CRM platform enabling hierarchical workflows and analytics across 500+ product SKUs, increasing visibility into regional sales performance.
- Enforced 4-tier role-based access control eliminating cross-scope data leakage and strengthening enterprise data security.
- Built high-performance MongoDB aggregation pipelines delivering sub-200ms dashboards and reducing frontend processing by 90%, accelerating operational decision-making.
- Designed a stateful workflow engine with audit history and concurrency-safe transitions, guaranteeing reliable lifecycle tracking without data loss.
- Implemented Redis-backed OTP authentication preventing brute-force attacks while sustaining <50ms verification latency.
- Integrated AWS S3 signed storage offloading 100% of file I/O, enabling horizontal scalability and infrastructure efficiency.

Article Academy Educational Platform

- Delivered a React/TypeScript platform serving 1000+ users, expanding digital access through mobile-first responsive architecture.
- Engineered a reusable component system reducing frontend duplication by 40%, accelerating feature delivery and maintainability.
- Integrated automated lead capture APIs and optimized asset rendering, improving responsiveness and user experience.

Software Engineer (Programming Analyst), AMS BuildTech Pvt Ltd Jan 2022 Jun 2023

- Developed distributed Python and Java microservices increasing system scalability and production resilience.
- Built monitoring and alerting pipelines reducing downtime by 20%, improving service reliability.
- Automated CI/CD pipelines accelerating deployments by 30% and reducing release friction.
- Delivered secure production features and documentation improving support efficiency by 25%.

PROJECTS

Global Loyalty Card System May Jun 2024

- Architected a globally distributed platform across three regions with latency-aware routing and multi-region replication, ensuring real-time consistency.
- Achieved 99.9% availability under load with automated failover and secure JWT-based service communication.

City Disaster Response System Oct 2023 Apr 2024

- Engineered a real-time disaster response platform using event-driven pipelines aggregating heterogeneous emergency data at scale.
- Optimized backend architecture supporting 1K+ concurrent users with sub-3s latency and NLP chatbot achieving 92% intent accuracy.

EDUCATION

Trinity College Dublin 2023 2024

Master's Program in Computer Science NFQ Level 9

Certification: Building RAG Apps Using MongoDB, MongoDB University 2025
